

Street Tree Removals & Replanting in CULVER CITY

Trees can be removed for several reasons

Safety Concerns

Public safety is paramount to the City. Diseased and dying trees are removed to prevent this hazard and to protect the safety of pedestrians and drivers.

Sidewalk Repairs

Sidewalk repairs can destabilize trees roots. Sometimes trees are removed to repair damaged sidewalks and to return them to federal accessibility standards.

Private Construction Projects

New development can require the removal of trees to accommodate the project. For every tree removed, two are planted in its place.

Removal Requests

Property owners can request a tree removal from their parkway. Application, fee, and justification must be submitted for careful review by Public Works Director.

New Tree Replanting

New trees are planted 2-3 times a year. Refer to the Urban Forest Master Plan to read about recommended species.
